

# A CFD-based local sensitivity study of the aerodynamic performance of strut-braced wing aircraft

M. Fossati, B. Jones, P. Nagy, E. Minisci, G. Arnoult, M. Meheut

# Outline

- Adaptive-cut HDMR
- DoE and problem definition
- High-fidelity local sensitivity analysis:
  - Drag decomposition and analysis
  - Lift decomposition and analysis
  - Constant lift analysis (N=1)
- Final remarks

# High-fidelity sensitivity analysis: A-cut-HDMR

- The cost function is decomposed into individual n-factor contributions and their interactions
- The decomposition is used to analyse the influence of the parameters on the cost function and facilitate the interpretation of the physics

$$f(\mathbf{U}) = f_c + \sum_{i=1}^{N_u} F_i(U_i) + \sum_{i < j \leq N_u} F_{i,j}(U_i, U_j) + \dots + F_{1,2,\dots,N_u}(U_1, U_2, \dots, U_{N_u})$$

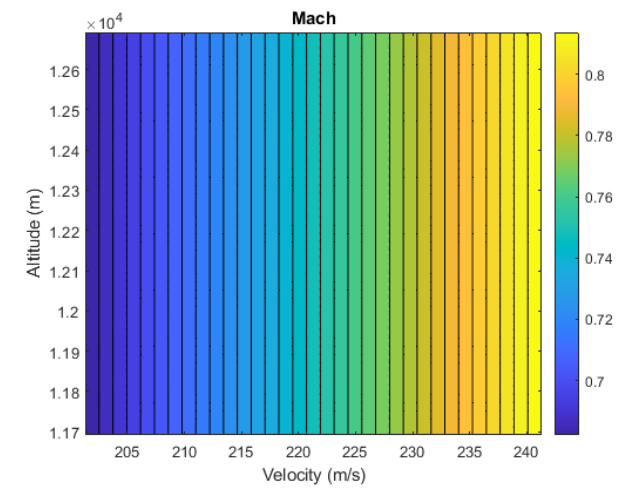

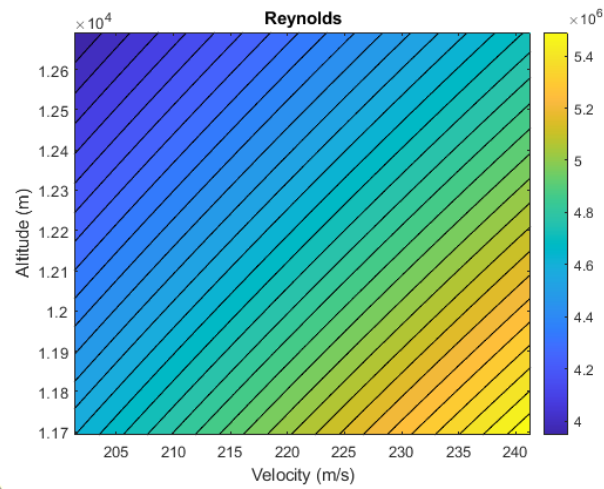

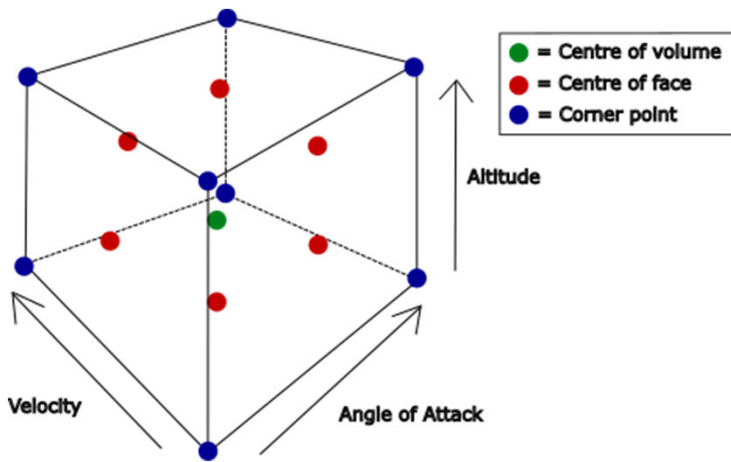

Example of a 2-factor decomposition

# High-fidelity sensitivity analysis: DoE

	Altitude [m]	Velocity [m/s]	Angle of Attack [deg]
Cruise	12,192	221.3	1.53
Range	$\pm 500$	$\pm 5$	$\pm 0.5$

*Initial DoE (left), variations of Reynolds (centre) and Mach number (right) over the parameter space*

# Solution at cruise conditions

Altitude [m]	Velocity [m/s]	Angle of Attack [deg]	$C_L$	$C_D$
12,192	221.3	1.53	0.638	239*

\*drag count

# Reduced Order Modelling approach: Proper Orthogonal Decomposition

- ROM is built using snapshot-based POD, from 43 snapshots
- Validation through leave-one-out error analysis on Lift and Drag

# Outcome of the sensitivity for Drag

Drag at cruise: 14.137 kN

	Min $\Delta D$	Max $\Delta D$	Drag Range	Combined
$v$	-7.51%	16.42%	23.92%	23.92%
$\alpha$	-7.87%	10.74%	18.62%	18.62%

## Final remarks & Acknowledgment

- For the given range of parameters the central design will experience substantial changes in lift and drag
- Velocity and Angle of Attack are the most relevant parameters
- Angle of Attack is the most relevant for small deviations from cruise conditions
- Indications that the wave drag on the strut is a dominant factor
- Comparison with a cantilever wing configuration of the same design is underway

*This work has been part of a collaborative effort between RHEA and UHARWARD consortia. A special acknowledgment goes to POLIMI and ONERA for the exchange of data and the analysis*
